International Research Workshop of the Israel Science Foundation on

Advances in Pattern Formation: New Questions Motivated by Applications

Celebrating Ehud Meron's 65th birthday

February 18-22 (2019), Sede Boqer campus of
Ben-Gurion University of the Negev, Midreshet Ben-Gurion, Israel

The workshop aims to address cutting-edge advances and future prospects in a wide range of research fields where pattern formation phenomena play or are expected to play essential roles, such as:

- **Inanimate matter:** nematic elastomers, electrolytes, fluid dynamics, elasticity and buckling, granular media, wetting and thin films, spintronic nanowires
- **Systems biology:** Bacteria, cancer, hearing, cellular networks, actin oscillations and waves, somitogenesis, morphogenesis
- **Ecology:** Vegetation patterns and fronts, desertification, early-warning signals, restoration, biodiversity, vegetation-climate interactions
- **Analytical and numerical methods:** Bifurcation theory, localized states, nonlinear waves and fronts, dynamics near fast-slow manifolds, synchronization, gradient flow, stochasticity and fluctuations, numerical continuation
